YOUNG PEOPLE, MUSIC & THE INTERNET

a guide for parents about P2P, file-sharing and downloading

What is P2P?

As a parent, you've probably already heard your children talk about "file-sharing", "downloading" or "P2P" (peerto-peer). It's a hot topic for young people. The main reason: music.

People of all ages have always loved to share music, and – just as with digital photography – the Internet has made it extremely easy to share tunes with friends (and strangers) anywhere. But it's important to note that you can be sued for taking music from services like Kazaa, E-Donkey and BitTorrent that offer unauthorized file-sharing.

P2P has recently received a lot of media attention because of legal issues dealing with businesses and individuals sharing copyrighted music and movies. The Supreme Court has ruled that, in addition to individuals, P2P companies can be sued for encouraging people to illegally swap songs and movies over "How the Internet. **But illegal** can my kids downloading enjoy digital is just one of the risks music over the involved. **Internet while** This guide will help you staying safe to understand and legal?" how your family can enjoy digital music and stay safe and legal.

TYPICAL! I JUST GOT TH WWW'AND A

How does P2P work?

Each file-sharing network is a little different, but basically a file-sharer goes to a website and downloads its P2P software onto the computer. Usually the software creates a "shared media" folder on your computer which opens it up to fellow file-sharers. This enables you to exchange photos and videos, as well as music, software and games, directly between your computer and theirs.

What are the risks to my children?

There are benefits to file-sharing – for example, you could make your own created music available to millions of people. But the risks of using unauthorized P2P services are real too.

HARMFUL CONTENT/ CONTACT

The greatest risk to children on P2P is unwelcome content, such as pornographic or violent images. Indeed, studies have shown that porn is being widely shared on the P2P networks and that people purposely misname files to trick people into downloading them. A filter that can block website addresses and keywords on Web pages rarely blocks porn or violent images and videos on P2P networks. Even files named "Winnie the Pooh" or "Pokemon" have been found to contain pornography.

As a parent, you also need to be aware that file-sharing software can allow users to chat with other file-sharers, many of them strangers, so the same concerns and rules about chatting on the Internet should apply here too. See www.chatdanger.com.

pornography on P2P?"

PRIVACY AND SECURITY

File-sharing software opens "doors" in your computer which can compromise your privacy and security.

Spyware The biggest pest is spyware – little software programs that are downloaded with media files or "bundled" with file-sharing software.

Some spyware even logs your keystrokes and provides the person who controls it with passwords, credit card numbers and other confidential information on your computer.

Privacy You can inadvertently share more of your computer files with other file-sharers than you mean to. As studies have shown, this could include confidential information such as medical records and financial information.

Viruses File-sharers' computers are vulnerable to the viruses infecting other machines on the P2P networks and to people trying to control computers remotely, or spammers who want to make money by using thousands of "zombie" PCs to send ads about

"Could

files be

low-cost mortgages and cheap drugs. One study found that nearly half of the software files on one P2P network contained viruses or other malicious code.¹

If your child downloads one of these malicious files, your PC could be used, among other things, as a porn distributor. If your family PC has been performing slowly, file-sharing might be the culprit.

See article in Wired News: www.wired.com/news/business/0,1367,61852,00.html

Thousands of file-sharers have been sued by the recording and film industries- and virtually all the settlements have involved substantial fines. While there is no problem if you are sharing

the content that you have originally created yourself, nearly all music and film files on filesharing services are protected by copyright. and therefore people uploading (sending) them run legal risks.

"Is it true my son could be sued for downloading music from p2p?"

Downloading music without permission from p2p is illegal in most countries, including the United

LEGAL BILL.

a lot, run a greater risk of being sued or prosecuted. Parents can be held responsible for what happens on the family computer, even if they are not themselves engaged in illegal activity. In order to settle out of court people typically have to pay thousands of dollars.

So what can we do as parents?

There are 3 practical steps you can take right now:

1 Talk with the filesharer(s) in your home!

File-sharing and other forms of technology in the home are opportunities to increase parent-child communication. Get your children to show you how they are using the computer and what they are sharing. Talk about copyright, and who loses out when songs get distributed without permission on the Internet – musicians? Songwriters? Are they deprived of the chance to earn a living from their work? But also - who pays the bill if someone in your house gets sued?

2 Check your computer

You can make sure you are aware of what is on your family computer – whether you or another member of the household put it there. There is free information available that will take you through how to identify or disable P2P software step by step; see, for example, www.musicunited.org.

It is also important to make sure that your computer is protected against viruses and spyware and has firewall software installed. You can usually get free anti-virus software from your Internet service provider (ISP). Up to date anti-virus software can help capture anything downloaded from P2P. See www.getnetwise.org for details of tools to help protect your computer.

> "How do I know if I have files that are being shared on my computer?"

3 Explore the Web's legal music

There's plenty of it – more than a million tracks of all genres and periods – both for purchase and for free. For less than the price of a cup of coffee, you can download a track from a legal music retailer and keep it for life. There are numerous legal music sources on the web (including legal P2P services) and these sites are safe and guarantee sound quality. For links to legal music sources, go to www.musicunited.org.

There's also plenty of legal music available free of charge on the Web – sites where musicians want fans to sample their work and learn about concerts and albums they're promoting. To find them, search a favorite musician, group or label's own site. Sound quality may vary, but there's a great deal to explore.

THE NEW MUSIC SITES ARE LIKE HAVING A RECORD STORE YouR BEDROOM THATS IF ANYONE -Would DARE YOUR BEDROOM

Resources and further advice

For everything you want to know about music online and checking your computer, see www.musicunited.org.

For an online guide to making the Internet & technology fun, safe, and productive, see **www.safekids.com**.

For daily kid-tech news for parents, including the latest on P2P, see www.netfamilynews.org.

If you have information that will help the fight against child sexual exploitation you can report it to www.cybertipline.com.
